

Enterprise Mobile Messaging App for Business Productivity

Consumer messaging apps have recently become very popular for communicating business information within an organisation and with external partners. Use of these apps to share confidential company information poses a risk of information security breach and data leakage.

Is sensitive information being shared over unsecured public messaging apps?

Are you looking for seamless workflow collaboration within the company?

sqoope is your answer to integrating communication channels and workflow processes within a company effortlessly. It is like any consumer messaging app with additional emphasis on privacy and confidentiality, especially built for enterprises.

Any business unit or individual staff can start a one-on-one or multi-user group chat on a unified platform. You can also add external vendors in your private group chat for ease of collaboration.

sqoope enables message archival, provides encryption and security and can be easily scaled from a small company to the multi-national companies.

The **sqoope** difference:

WORKFLOW INTEGRATION 01

You can easily integrate with any application to create a multi-channel communication eco-system. This means you can now streamline processes (data sharing, information dispatch and other activities) from multiple applications to enhance the workflow and improve productivity.

PRIVACY & CONFIDENTIALITY 02

All chats are encrypted and logged on the server for archival for future reference. Also, you can now safely send messages and files knowing that only the intended recipient will be able to see your message.

MESSAGE VISIBILITY 03

You can now track message delivery and acknowledgement status in real time. With four distinct message indicators (Sent, Delivered, Read & Acknowledged), it guarantees message delivery as well as acknowledgement from the recipient on viewing it.

STREAMLINE COMMUNICATION 04

Rich features such as creating labels, starred messages make it easy to track discussion threads. You can also send files in various multimedia formats (platform dependent) such as documents, images, audio & visual recordings.

Salient Features

INTEGRATION & COMPATIBILITY

RELIABILITY

PRIVACY

- **Multiple devices usage:** It has a web platform which seamlessly complements the mobile app
- **Works on popular operating systems:** Android, iOS
- **Integration with APIs:** Connects with all front-end and back-end applications for delivery of messages
- **Reliable message delivery:** All messages are tagged with delivery statuses 'Sent, Delivered, Read & Acknowledged'
- **Multi-channel messaging capability:** Multi-channel messaging through 3G, Wi-Fi, and SMS. When augmented with sendQuick SMS gateway appliances, it sends out messages to recipients in critical situations independent of data network
- **No breach of data on loss of phone:** You can remotely disable the application if the user loses the mobile device (with wipe out function)
- **Private server:** The server is installed behind the organisation's own firewall and only authorized users from within the organization are allowed to use keeping sensitive information within the enterprise

Appliance Specifications

Intel CPU Processor
Min 1 TB HDD
Hardened Linux OS
Min 8GB RAM
1 U rack mountable [432(W) x 305(D) x 43(H)mm]
200W PSU (x1)
Estimated weight: 9KG
4 x USB
Certification: CE, FCC, UL, RoHS

sqoope is available on the following platforms

Appliance

Hosting

Cloud

VM

VM Specifications

Min 2 Core CPU
Min 16GB RAM
Min 1TB HDD

Software Specifications

sqoope software
Web Interface Configuration
